

## The VitaLazer™

### Food and Beverage Laser

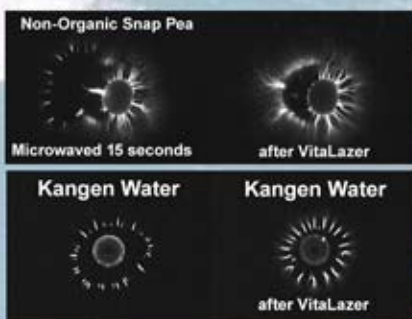

- ☉ Increase vitality of food and beverages 400%
- ☉ Recode food with healthy nutritional information
- ☉ Improve the taste of food and beverages
- ☉ Reverse negative effects of microwaving
- ☉ Neutralize response to toxic food additives
- ☉ Promote a natural balance of pH
- ☉ Encourage healthier digestive function

Water is the most abundant element on the planet. It covers over 75% of the earth's surface. Likewise our body is also composed of over 75% water. Being hydrated is critical to maintaining proper biological function. Therefore, it stands to reason that the quality of the water we choose to drink would make all the difference.

Municipal water supplies are known to contain high concentrations of chemicals that may not be healthy to consume and store bought water tends to be acidic. What if you knew you could simply laser your water even if it was slightly acidic and when you consumed it your body would go into a natural balance of pH. Even if you drink a high pH, low ORP water product wouldn't it be nice to know that you can still significantly enhance the quality and vitality of your drinking water in just 10 seconds with the **VitaLazer**.™

The **VitaLazer**™ is designed to deliver nutritionally corrected biophotonic information to the food and water you consume. The **VitaLazer**™ is also designed to neutralize the unhealthy energetic influence of unknowingly consuming GMOs & food additives such as preservatives, artificial sweeteners and dyes. If you eat raw organic foods you will find the **VitaLazer**™ to be an indispensable tool that will quickly become your best friend.

### Non-Organic Snap Pea

Microwaved 15 seconds

after VitaLazer

The image on the left demonstrates a Snap Peas after being microwaved 15 seconds. Notice how the life force within the pea escapes its energy field as though there had been an explosion. Treatment of the same pea with the VitaLazer as shown on the right made its energy whole again, thus revitalizing it. The treated pea shows a more intense & cohesive pattern than its counterpart. Dr. Thom Lobe MD

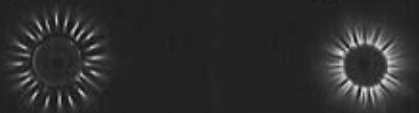

Raw Organic Pea

after VitaLazer

The energy of the VitaLazer treated pea is more expansive than before the pea was treated. This expansiveness relates to the vitality of the pea after treatment. It is now more alive. This enhanced energy is then primed to resonate with the body after ingestion. The result is better tasting food that's better for you. Dr. Thom Lobe MD

Fiji Water

Fiji Water

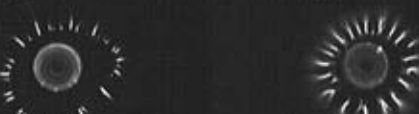

after VitaLazer

The image of Fiji water on the left shows an incoherent and relatively weaker energy signal that is attenuated compared with the Fiji water treated with the VitaLazer. Notice the energy gaps and the dimmer signal on the left when compared with the Fiji water treated with the VitaLazer. This is indicative of a stronger life force associated with the treated water. Dr. Thom Lobe MD

Kangen Water

Kangen Water

after VitaLazer

The energy signal of the Kangen water on the left is quite a bit weaker in brightness & magnitude. The VitaLazer treated Kangen shows a brighter, more intense signal from which the energy extends outward, suggesting greater force of strength to the signal as a direct result of the VitaLazer treatment. Dr. Thom Lobe MD
